The list provides the following information:

Name: Name of the backup, usually the filename.

Path: Full path to the file on the server.

Status: Processing (the backup is being processed), validated (the backup is validated), failed (failed to create or validate the backup), deleted (deleted file because of retention period).

Type: Data-only (the backup has full database dump and no code), data-only-partial (the backup has database dump without several log, monitoring etc, tables), full (full database + code backup).

Created: Date of creation.

Size: In bytes.

Options: Show backup process, delete.

Adding a Backup

Manually request a backup of specific type by clicking the "Add Backup" button at upper left of the backups list. Select the type of backup from the dropdown and click "Create Backup".

	Add backup
Backup Management	Backup Type *
Below you will find the list of existing backups. You can create some columns or use the search by backup name input.	Data only
Backup List	Close Create Backup

After selecting the backup, a new row is added to the list. Click on the progress icon in the "Options" column to monitor the progress of the backup.

A backup being created in ProVision may take some time depending on the size of the database.

Backup Settings Management

6 PV-BACKUP V1.0.0		ops@6connect.com
🛆 Home	Backup Settings Management	
BACKUP MANAGEMENT		
8 Backups	This view displays all the backup settings. You can conf percentage, and the number of backups you want to lin	igure the backup retention period for logs and backups, the HDD quota mit. Remember to hit the save button after making any changes.
★ Settings	Backup Settings	
🖻 Scheduler	Retention period logs	Retention period backup
USERS MANAGEMENT		15 d 10 d
2 Users	Retention period for logs in days	Retention period for backups in days
	HDD quota percent	HDD quota of backups
	HDD quota limit in percentage %	HDD quota limit in number of backups
	Timezone	
	UTC	~
		Save
	Con	uriaht @ Drawisian Backlin 2022

Adjust the sliders to set:

Retention period logs: How many days to keep the logs.

Retention period backups: How many days to keep a backup file.

HDD quota percent: When the storage reaches this percent an email will be sent. This checks only the utilization of the partition where the backups are stored, not every partition of the system.

HDD quota of backups: How may backups to keep (eg. last 10).

Click "Save" after making any changes.

Task Scheduler

There are currently five pre-defined system tasks:

Full Backup: Creates a full backup (data+code). By default, on the 1st of every month 6:00 UTC.

Data-only backup: Creates a data-only backup (full data, no code). By default, every Monday 6:00 UTC.

Data-only-partial: Creates a data-only-partial (data without log/monitoring tables, no code). By default every day of the week 6:00 UTC, except Monday.

Delete Backup: Deletes expired backups and logs (related to Retention period logs/backup and HDD quota of backups). By default every 5 mins.

FreeSpace: Checks the remaining free space and sends email notification if the free space is below the threshold. By default every day 8:00 UTC.

Editing or Executing a Task

Users can manually execute each task or modify its schedule.

To view task settings, click "View Task".

ask List			
Filters		Show: • Active All Search by name	Search
