

Working with DNS Records

Working with DNS Records

The screenshot shows a web interface for managing DNS records. At the top, there's a navigation menu with options like Dashboard, Resources, DNS, DHCP, Servers, IPAM, Peering, Reporting, and Global Commander. Below the navigation, there are tabs for DNSv3, DNS Groups, DNS Servers, DNS Zones, and DNS Records. A search bar and an 'Add Record' button are also visible. The main section is titled 'Record List' and contains several filter fields: Record Host, Record Type, Record Comment, Record Value, Last Query, Last Modified, Record TTL, Record Status, and IP Range. A 'Filter' button is located below these filters. Below the filters is a table with the following columns: Record Host, Record Type, Record Value, Last Queried, and Actions. The table contains three rows of PTR records.

Record Host	Record Type	Record Value	Last Queried	Actions
{1-255}.192.88.64.in-addr.arpa.	PTR	64-88-192-\$1-smartcom.sc2000.net. test test		Check Perms Delete
{1-255}.193.88.64.in-addr.arpa.	PTR	64-88-193-\$1-smartcom.sc2000.net.		Check Perms Delete
{1-255}.194.88.64.in-addr.arpa.	PTR	64-88-194-\$1-smartcom.sc2000.net.		Check Perms Delete

DNS Records may be managed either from the [Zone View](#) page (for the records under their respective zone) or globally through the **DNS Records** sub-tab.

Record Host	Record Type	Record Value	Last Queried	Actions
{1-255}.192.88.64.in-addr.arpa.	PTR	64-88-192-\$1-smartcom.sc2000.net. test test		<input type="button" value="Check"/> <input type="button" value="Perms"/> <input type="button" value="Delete"/>
{1-255}.193.88.64.in-addr.arpa.	PTR	64-88-193-\$1-smartcom.sc2000.net.		<input type="button" value="Check"/> <input type="button" value="Perms"/> <input type="button" value="Delete"/>
{1-255}.194.88.64.in-addr.arpa.	PTR	64-88-194-\$1-smartcom.sc2000.net.		<input type="button" value="Check"/> <input type="button" value="Perms"/> <input type="button" value="Delete"/>

From the DNS Tab, click on the "DNS Records" sub-tab button, or select it from the DNS dropdown menu.

All DNS records available in ProVision displays in a single Record List, along with Host, Type, Value, and Last Queried information.

Records may be sorted ascending/descending by "Record Host" name, or by "Last Queried", by clicking on the column header name / sort arrows.

Filter Records

Search for specific records by filtering by Host, Type, Comment, Value, Last Query, Last Modified, Record TTL, Status, or IP Range.

After entering your filter criteria, click "Filter".

Record Actions

For each record, you may:

- Click the "Check" button to run a DNS Monitor error check on the record
- Review or change record permissions by clicking "Perms" (Admin only)
- Delete the record by clicking "Delete"
- Review or Edit record details by double-clicking on the row for the desired record.
 - Review record revision dates or enter your desired edit, then click "Save changes" to complete.

Edit NS record

Type: NS

Host: 123zone.com.

Value: ns1.example.com.

TTL: 1 hour

Comment: You can add a comment to the record, that will not be pushed to the server.

Skip Validation.

Record revisions

Working with Zone Records - Zone View Page

Record Types

The Zone View page supports 20 record types, as well as the ability to add a custom/arbitrary record type manually.

Available record types include the following:

- A
- A6
- AAAA
- CNAME
- CAA
- DNAME
- DNSKEY
- DS
- HINFO

- LOC
- MX
- NAPTR
- NS
- PTR
- RP
- SPF
- SRV
- TLSA
- TXT
- URI
- Other

OTHER Record Types

When working with DNS Zones and Records, additional record types may be manually added by selecting "Other" when adding a new record.

S64 DNS users can use record type "Other" to add "SYNTH" or "TYPE65464" type records similar to the format below:

```

$ORIGIN 30 IN TYPE65464 ${p4} PTR ${a4}.pool.example.com.
$ORIGIN 600 IN TYPE65464 ${a4} A ${a4}
$ORIGIN TYPE65464 ${p6} PTR user${a6}.my.example.com.
$ORIGIN 5 IN SYNTH user${a6} AAAA ${a6}
$ORIGIN IN SYNTH nptr-${u} NAPTR 10 20 "A" "" "" srv-${u}
$ORIGIN IN SYNTH srv-${u} SRV 10 20 1234 srv-addr-${u}

```

However, arbitrary / other record types are unable to be validated, so use with care!

Add Zone Records

From the Zone View page, under DNS Records, look for the line "Add a new ___ Record".

Select the desired record type from the dropdown list, then click "Add".

The screenshot shows the "DNS Records" section of a web interface. At the top, there is a form to "Add a New" record. The "Record Type" dropdown menu is currently set to "NS" and is circled in red. To its right is a blue "Add" button, also circled in red. Below the form is a table of existing records:

Record Type	Record Data	Actions
SOA	hostmaster.example.com. mail.example.com. (2019022001 172800 900 3600 86400)	
NS	host.example.com. maps to ns1.example.com	Delete Check Perms

Fill in the information for the new record, selecting options for adding to groups or skipping validation.

Edit NS record

Type: NS

Host: ex: host .example.com.

Value: ex: ns1.example.com

TTL:

Comment: You can add a comment to the record, that will not be pushed to the server.

Add to all groups.

Skip Validation.

Close Save changes

When done, click "Save Changes".

A Note on Quotes

When working with records (like TXT), there is no need to add quotes around the record value - ProVision will automatically add double quotes for the TXT records on Zone Push, and will also automatically use quotes to split TXT values larger than 255 characters.

If your record value contains internal quotes that you wish to keep, you may escape it by adding a backslash (\) before the quote from the "Edit Record" screen.

Examples:

In the Edit Record screen, there is no need to add quotes to the record value, as seen below:

A screenshot of a web form for editing a DNS record. The form is titled 'Type: TXT'. It contains several input fields: 'Host' with the value 'test2.acctest.com.', 'Value' with the value 'qweqwe qweqwe', and 'TTL' with a dropdown menu set to '1 hour'. Below these is a 'Comment' text area containing the text 'You can add a comment to the record, that will not be pushed to the server.' and a checkbox labeled 'Skip Validation.' which is unchecked. At the bottom of the form is a 'Record revisions' section with a right-pointing arrow. At the very bottom are two buttons: 'Close' (orange) and 'Save changes' (blue).

However, if an internal quote exists that you wish to retain, escape it by using a backslash (\) before the quote(s):

A screenshot of a web form for editing a DNS record, similar to the one above. The 'Host' field contains 'test4.acctest.com.' and the 'Value' field contains 'asdsa \" wqe qwe'. The 'TTL' dropdown is set to '1 hour'. The 'Comment' text area contains the same text as in the previous form. The 'Skip Validation.' checkbox is unchecked. The 'Record revisions' section and the 'Close' and 'Save changes' buttons are also present at the bottom.

When done editing the record, click "Save changes".

Repeating this to create four TXT record examples, we end up with the following for test1 through test4:

TXT	test1.acctest.com. maps to qweqwe	Delete	Check	Perms
TXT	test2.acctest.com. maps to qweqwe qweqwe	Delete	Check	Perms
TXT	test3.acctest.com. maps to "qweqw qwewq"	Delete	Check	Perms
TXT	test4.acctest.com. maps to asdsa \" wqeqwe	Delete	Check	Perms

These four records become the following in the zone file once pushed (note the automatic addition of quotes around the values, and the escaped quotes in test3 and test 4):

```
test1.acctest.com. 3600 IN TXT "qweqwe"
test2.acctest.com. 3600 IN TXT "qweqwe qweqwe"
test3.acctest.com. 3600 IN TXT "\"qweqw qwewq\""
test4.acctest.com. 3600 IN TXT "asdsa \" wqeqwe"
```

If you have additional questions on handling of quote characters in zone records, contact support@6connect.com.

Autogenerate Forward Zone Records

From the Zone View page, under DNS Records, look for the line "Add a new ___ Record".

Select the desired record type from the dropdown list, then click "Add".

DNS Records

Add a New NS Record Add

Record Type	Record Data Q	Actions
SOA	hostmaster.example.com. mail.example.com. (2019022001 172800 900 3600 86400)	
NS	host.example.com. maps to ns1.example.com	Delete Check Perms

Enter the Host value for the record.

For the Record Value, enter the IP Address, using brackets for the last octet to denote the range of IPs.

Example:

Host: h69-131-159-\$1.qncyfi

Value: 69.131.159.{240-255}

Edit A record
✕

h69-131-159-249.qncyfi.acctest.com.	3600	IN	A	69.131.159.249
h69-131-159-250.qncyfi.acctest.com.	3600	IN	A	69.131.159.250
h69-131-159-251.qncyfi.acctest.com.	3600	IN	A	69.131.159.251
h69-131-159-252.qncyfi.acctest.com.	3600	IN	A	69.131.159.252
h69-131-159-253.qncyfi.acctest.com.	3600	IN	A	69.131.159.253
h69-131-159-254.qncyfi.acctest.com.	3600	IN	A	69.131.159.254
h69-131-159-255.qncyfi.acctest.com.	3600	IN	A	69.131.159.255

When you are done, click "Save Changes" to complete the edit.

Autogenerate Reverse Zone Records

ProVision can be configured auto-generate IPv4 / IPv6 PTR records in reverse zones based on template.

Example IPv4 :

If the zone is named 33.44.in-addr.arpa.

Host : {100-150}.{22-24}
Value : \$1-\$2-available.example.com.

The generated records on push will look like :
100.22.33.44.in-addr.arpa. IN PTR 100-22-available.example.com.
101.22.33.44.in-addr.arpa. IN PTR 101-22-available.example.com.
...
149.24.33.44.in-addr.arpa. IN PTR 149-24-available.example.com.
150.24.33.44.in-addr.arpa. IN PTR 150-24-available.example.com.

Example IPv6 :

If the zone is named 0.f.e.d.c.b.a.9.8.7.6.5.4.3.2.1.ip6.arpa.

Host : 0.{0-f}.{2-3}.d.c.b.a.9.8.7.6.5.4.3.2.1
Value : \$1-\$2-host.example.com.

The generated records on push will look like :
0.0.2.d.c.b.a.9.8.7.6.5.4.3.2.1.0.f.e.d.c.b.a.9.8.7.6.5.4.3.2.1.ip6.arpa. 3600 IN PTR 0-2-host.example.com.
0.1.2.d.c.b.a.9.8.7.6.5.4.3.2.1.0.f.e.d.c.b.a.9.8.7.6.5.4.3.2.1.ip6.arpa. 3600 IN PTR 1-2-host.example.com.
...
0.e.3.d.c.b.a.9.8.7.6.5.4.3.2.1.0.f.e.d.c.b.a.9.8.7.6.5.4.3.2.1.ip6.arpa. 3600 IN PTR e-3-host.example.com.
0.f.3.d.c.b.a.9.8.7.6.5.4.3.2.1.0.f.e.d.c.b.a.9.8.7.6.5.4.3.2.1.ip6.arpa. 3600 IN PTR f-3-host.example.com.

Autogeneration of Reverse Zone Records is also performed when generating a reverse zone from the IPAM Gadget:

Autogenerate Reverse Zone

Autogenerate a reverse zone from an IP Block by clicking on the CIDR link in the block list.

IP	Size	Customer	Created	Updated	Reverse Zone
144.121.216.132/30	30	Customer	2018-07-16	-	NET-144-...
144.121.228.1	reverse zone: 144.121.216.132/30	Customer	2018-10-04	-	NET-144-...
144.121.228.128/29	29	Customer	2018-10-04	-	NET-144-...

The reverse zone will be created for the block, and the Zone View page will load, displaying further information and autogenerated records.

Import Zone Records

To import a zone file to populate record data in ProVision, go to the Zone View page for the zone. The zone must already exist in ProVision, although it may be empty

Tip

You may wish to enable "Save Import File" in Admin Settings > DNS Settings prior to importing zone files, so that the file is available for later download. See [Working with DNS Zones](#) or [Import DNS Zones](#).

Click "Import Zone" on the Zone View page.

example.com.

Example Group +

Push Zone Now Schedule Push Export Zone **Import Zone**

Edit the comment.

A Zone Import dialog box will open. Next to **Zone File:**, click "Choose File" and select your .zone file to import. Then, select an import policy to follow.

Zone Import

Zone Name: example.com.

Zone File: Choose File | No file chosen

Import Policy

- Default Records Add**
The records with the same hosts but with different values will be added (useful for Load Balancing).
- Skip records with the same host**
The import will skip adding records with hosts that already exists.
- Remove the existing hosts from the zone. WARNING!**
If the import contains a host that already exists in the zone, the existing records will be removed from the zone and the imported record will be added.

Import Zone Close

When done, Click "Import Zone".

Edit Zone Records

To edit an existing zone record, click on the record line in the DNS Records list.

The Edit Record dialog will open, allowing you to fill in record details.
