

# Admin Settings

## Overview

The screenshot displays the 'Admin Settings' page. At the top is a navigation bar with tabs: Settings, IPAM Admin, Data Import, Users, API, Scheduler, Scanning, Log, Approvals, Constraints, and Exit Admin. A search bar is on the right. Below the navigation bar is a sub-tab bar with buttons: Admin Settings, Application (selected), Authentication, DNS, DHCP, Peering, Templates, Scanning & Discovery, and Managed Servers. The main content area is divided into sections: 'Status' (showing license information and buttons for 'Manage License' and 'Display EULA'), 'Application Settings' (with fields for Time Zone, MySQL timezone, Support Email, Support Phone, Path to PHP, Path to Nmap, Nmap Options, Custom Id Label, Delete Logs after, and Disable RQ count), 'Backup Settings' (with Location mysqldump, File permissions, and a 'Save Changes' button), 'Manual Backup' (with Backup Location options: Cloud and Alternate Server, and a 'Backup Now' button), and 'Logging Options' (with Local Syslog Enable toggle and Remote Log IP field).

The Admin Settings page is the home page of the Admin section, where general platform preferences may be set.

To access it, click the **Settings** tab of the header from any page. From there, select "Admin". You will then have access the Admin section tabs, and will see the Admin Settings page. Each module area can be accessed by its own sub-tab button, available at the top of the page.

For details on each Admin Settings sub-tab, see the following areas:

- [Application Settings](#)
- [Authentication](#)
  - [RADIUS Authentication](#)
