ProVision supports multiple LIRs (Local Internet Registries) in a single instance. This means that you have the ability to update SWIP/RPSL functions for a given allocation with the LIR information that you wish.

Enter the Name, ASN, ORG ID, POC information, NET Name Prefix, and API Key. Additional Orgs may be added by selecting the "Add Org" button.

Be sure to click the "Save" button when done to save your changes.

Remember to SAVE!

Make sure to click the Save button or else the LIR data will not save.

### RIPE

Adding a new LIR with RIPE selected for RIR will bring up the following fields.

#### **RIPE Integration**

You must be using an MD5 password to update RIPE objects from ProVision! Please refer to RIPE's authentication page for additional details:
