

# Resource Import from CSV

## Simple Upload / Import from CSV

The [Simple Upload / Import from CSV](#) tool is used if you have a simple .csv file with customer / contact information, such as Name, Address, Billing Address, Phone numbers, POC, etc. It is accessed from the [Data Import Tab](#) from the [Admin](#) section of ProVision.

Information on preparing data for import and using each import tool is available at <https://docs.6connect.com/display/DOC/Importing+Your+Data>.

Sample import templates are available [here](#).

<b>Resource Import:</b> <ul style="list-style-type: none"><li><a href="#">Simple Upload/Import from CSV</a></li><li><a href="#">Resource Import Tool "Beta"</a></li></ul>	<b>DNS Import:</b> <ul style="list-style-type: none"><li><a href="#">BIND Zone Upload/Import</a></li><li><a href="#">PowerDNS Zone Import</a></li><li><a href="#">InfoBlox Zone Import</a></li><li><a href="#">NS One Zone Import</a></li><li><a href="#">Dyn DNS Zone Import</a></li><li><a href="#">DNSMadeEasy Zone Import</a></li><li><a href="#">IPPlan Zone Import</a></li></ul>
<b>IP Import:</b> <ul style="list-style-type: none"><li><a href="#">Upload/Import from CSV</a></li><li><a href="#">Import from RIR</a></li></ul>	
<b>Peering Import</b> <ul style="list-style-type: none"><li><a href="#">Import BGP Sessions</a></li></ul>	

To import your customer / contact information, follow the following steps:

- [Before you Begin: Prepare your Data for Import](#)
- [Step 1: Create a new Resource / Customer Import Job](#)
- [Step 2: Define Columns](#)
- [Step 3: Reviewing Data](#)
- [Additional Information](#)

## Before you Begin: Prepare your Data for Import

The [Simple Upload / Import from CSV](#) tool requires only a .csv file for importing.

Be sure to review "[Preparing Data for Import](#)" on the [Importing your Data](#) page before you begin. Verify that your .csv is correctly parsed and cleanly formatted with your customer/contact information (using your choice of the available field list shown below), and is UTF-8 encoded for best results.

Be sure to check that your data is cleaned up with the following steps:

- Remove any empty rows in the data range
- Remove any empty columns in the data range
- Remove stray data from inside and outside the data range, such as:
  - notes, comments, and placeholder text as field values, when not set as their own data column
  - nested secondary information located in additional rows under a primary record
- Ensure proper data formatting
  - Check for data formatting errors - a common issue is leading zeros being dropped from a ZIP field when a file is opened. Re-specify format as needed.
  - Ensure each field has consistent formatting for values
- Ensure unique values for primary identifiers, such as Resource Name and ID Fields

### **Data Encoding Format**

To ensure correct importing of any special characters, make sure to use UTF-8 encoding for your CSV file!

This Resource Import from .csv tool supports the following fields:

Select the .csv file that you prepared above by selecting the "Choose File" button, and browsing to the correct file location. Then hit "Start Import".

**Step 1: New Import**  
The Customer Import accepts CSV files in a variety of configurations and formats. For an example file, [click here](#). Please make sure all data files are encoded with UTF-8 for best results.

Job Name:  
Sample Customer Import

Description:

Choose File customer-import-test1.csv

Start Import

File must be in CSV Format.

### Working with Large or Multiple Data Sets

Although you cannot add new files to an existing job, for jobs with multiple sources for data (which may have different formatting), you can simply create separate jobs and descriptions for each source - no need to manually combine the data into one file before importing. The Import tool's mapping and editing functions will allow for the data to be reconciled in ProVision.

For large data sets where multiple stages of manual review might be needed, you can create a new job using the same set of data files in order to work in parallel on a different portion of the data.

After importing, the new job will appear under the "Existing Jobs" section.

To continue working with this job, select it from the list (by clicking on the link) and the next step ("Define Columns") will appear at the bottom of the page.

**Existing Jobs**  
Sample Customer Import last modified 13-07-2018 2:22 PM

**Step 1: New Import**  
The Customer Import accepts CSV files in a variety of configurations and formats. For an example file, [click here](#). Please make sure all data files are encoded with UTF-8 for best results.

Job Name:  
Sample Customer Import

Description:

Choose File No file chosen

Start Import

File must be in CSV Format.

**Step 2: Define Columns**  
The Import process requires you to enumerate the function of the columns in the provided CSV. The 'Customer Id' field is your internal customer identification system and can be referenced elsewhere.

Unique ID	Name	Phone	Phone 2	Mail_street_1
101	Oregano	408-555-2341		55 Pizza Ave.
102	Basil	408-555-2341	408-555-1774	367 Maple Ave.
103	Thyme	756-344-3241		123 State St.

Next

## Step 2: Define Columns

Using the dropdown menu above each data field, select the appropriate definition for each of the imported columns. **Phone** and **Fax** may have multiple columns associated with the data. Other columns which do not apply under the available definitions should be left as blank, and will be skipped during the upload process.

Note: the following fields are REQUIRED:

- Name (Unique Resource / Customer Name)

- Customer ID (Unique non-name identifier)

Make sure that you have defined all desired fields by using the scroll bar below your data to view additional columns.

When completed, hit "Next".

**Step 2: Define Columns**

The Import process requires you to enumerate the function of the columns in the provided CSV. The 'Customer Id' field is your internal customer identification system and can be referenced elsewhere.

Customer Id	Name	Phone		
Unique ID	Name	Phone		
101	Oregano	408-555-2341		Mail_street_1
102	Basil	408-555-2341		55 Pizza Ave.
103	Thyme	756-344-3241		367 Maple Ave
				123 State St.

## Step 3: Reviewing Data

After supplying the file and defining columns, a review step is provided. Records with errors will show as color coded, and can be filtered to be viewed by All, Valid, Warnings, Invalid, or Ignored.

From here, the records can be edited or ignored. Select "Ignore" for records that you do not wish to import at this time. Records that are Ignored or Invalid will automatically be skipped.

### Header Rows

If your .csv has a header row as the first line, that row will be shown as the first record in review data as well. Simply click "Ignore" on the first record to disregard the row.

For rows with an "Invalid" or "Warning" status, you may wish to edit the record to change information to a valid option.

**Step 3: Review Data**

Please review the data for correctness. Invalid and ignored rows will be skipped.

View:

Name	A customer already exists with this name!	<input type="button" value="Enable"/>
Oregano	A customer already exists with this name!	<input type="button" value="Edit"/> <input type="button" value="Ignore"/>
Basil		<input type="button" value="Edit"/> <input type="button" value="Ignore"/>
Thyme		<input type="button" value="Edit"/> <input type="button" value="Ignore"/>

Hitting the "Edit" button for the record provides options to change or add information for available fields.

Please review the data for correctness. Invalid and ignored rows will be skipped.

Edit

Ignore

In this example, as "Name" was the invalid field, it has been updated to a unique value. The "Custom Field" value has been added as well.

After making the desired edits, hit "Save".

The data record will be re-checked for validity, and will have a white background if it is now valid for import.

### Step 3: Review Data

Please review the data for correctness. Invalid and ignored rows will be skipped.

### Step 4: Import Data

When you have reviewed the data import job for accuracy, hit the **Execute Import** button. All rows which are disabled, invalid, have warnings, or were previously successful will be passed over. Successful import rows will be marked as such.

Execute Import

After data has been reviewed for accuracy, you may execute the import.

## Step 4: Execute Import

When the review step is completed, hit the "Execute Import" button.

### Step 3: Review Data

Please review the data for correctness. Invalid and ignored rows will be skipped.

View:

Oregano 2

Basil

Thyme

### Step 4: Import Data

When you have reviewed the data import job for accuracy, hit the Execute Import button. All rows which are disabled, invalid, have warnings, or were previously successful will be passed over. Successful import rows will be marked as such.

A progress bar will appear to and display the records as they are imported.

When the bar reaches 100%, and displays "Current Step: Finished!" the import is complete, and you may leave the page.

### Step 4: Import Data

When you have reviewed the data import job for accuracy, hit the Execute Import button. All rows which are disabled, invalid, have warnings, or were previously successful will be passed over. Successful import rows will be marked as such.

Current Step: Finished!
