Improvements

IPAM "Show Only Leaf Nodes" Filter

CFR / IM - 3820: Added a new filter to IPAM Manage to limit displayed blocks to only "leaf nodes"

Limit the displayed blocks in IPAM Manage to only child blocks / leaf nodes by selecting the filter checkbox option "Show leaf nodes only", and parent blocks will be hidden.

The screenshot shows the 'Manage aggregate' interface for the IP address range 2001:506:6000::/35 - ARIN. The table lists various IP blocks with columns for Address, Umbrella, NAT, Region, Tags, Assigned to, Custodian, ASN, and Updated. A sidebar on the right contains 'Filtering options' with checkboxes for 'Show important blocks only', 'Select all masks', and 'Show Leaf Nodes only' (which is checked and highlighted with a red box). There is also a 'Mask' section with a 'click to select...' dropdown and a 'LIR' section with another 'click to select...' dropdown.

IP Address	IP Umbrella	IP NAT	IP Region	IP Tags	IP Assigned to	IP Custodian	IP ASN	IP Updated
2001:506:6000::/64	-	-	-	3M	0	-	-	2020-07-28
2001:506:6000:1::/64	-	-	-	available	0	-	-	2020-07-28
2001:506:6000:2::/63	-	-	-	available	0	-	-	2020-07-28
2001:506:6000:4::/62	-	-	-	3M	0	-	-	2020-07-29
2001:506:6000:8::/61	-	-	-	available	0	-	-	2020-07-28
2001:506:6000:10::/60	-	-	-	available	0	-	-	2020-08-21
2001:506:6000:20::/59	-	-	-	available	0	-	-	2020-07-28
2001:506:6000:40::/58	-	-	-	available	0	-	-	2020-07-28

Note: "Show Leaf Nodes Only" is only available to select while in Parent View, or while having sufficient masks selected to display both parent and child blocks. You may quickly display all masks by enabling the filter "Select all masks", right above "Show leaf nodes only".

Auto Generate VLAN Resource

CFR / IM - 3842: ProVision now auto-generates a SystemVLAN resource for Domain-VLAN pairs associated with IPAM blocks.

A Domain-VLAN pair associated with a block in IPAM Manage will link to the created VLAN system resource, which allows users to document additional information for the VLAN, such as POC / Contacts, Linked Resources, Notes, and create or edit Custom Resource Fields. SystemVLAN sections may not be edited.

Notes

Bug Fixes/Minor Improvements

- IM - 3837: Updated resource page navigation to direct to the "new" Resource List after saving edits to a Section.
- IM - 3843: Resolved an issue where settings entered into Admin Preferences Authentication Settings for SAML / DUO would not save.
- IM - 3844: Fixed an error in Constraints that would occur while saving changes to input control options.
- IM - 3849: Fixed a minor typo with the ACP Workflow Gadget.
