Users and Groups are managed from the Admin area, under the [Users](#) tab. The Users tab contains three sub-tabs: **Users**, **Groups**, and **Chart View**.

To open the Groups list, click on the **Groups** sub-tab button under the [Users](#) tab.

Groups Permissions Overview

ProVision administrators can also create permission groups to assign users under. This allows more control over user roles.

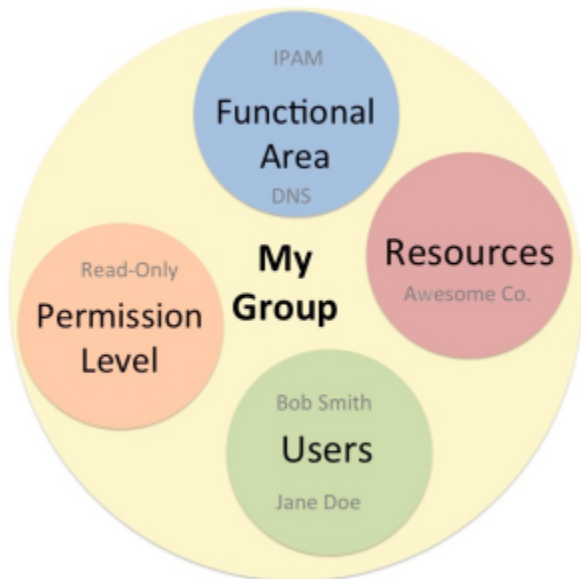

A Group has four elements associated with it:

Users: The Users that are assigned to the group, and will be limited by the selected permissions.

Resources: Resources access may be set to Global TLR (applies to all resources), or to the level of individually selected resources.

Functional Area: The ProVision functional area (IPAM, Resources, Peering, etc) for the selected resource(s) that permissions are set under.

Permission Level: Create, Read, Update, and Delete (C/R/U/D) permissions may be set under each functional area for each resource selected.

In the example above, the group "MyGroup" allows the users Bob Smith and Jane Doe to only read IPAM and DNS data for the Resource "Awesome Co".

Through the use of these four elements, Groups can create permissions structures that are as flexible as you need.

Default Groups

Two default groups are available initially in ProVision:

- Global Admin (may not be edited or deleted)
- Global Read-Only (may not be edited or deleted)

These Global groups allow for access to the entire ProVision platform. You may add additional Global groups by creating a new group using the TLR (Top Level Resource). You may also add detailed resource level group permissions by selected individual resources.

For more detail on top-level and resource permissions, see [Global Permissions](#) and [Resource Permissions](#).

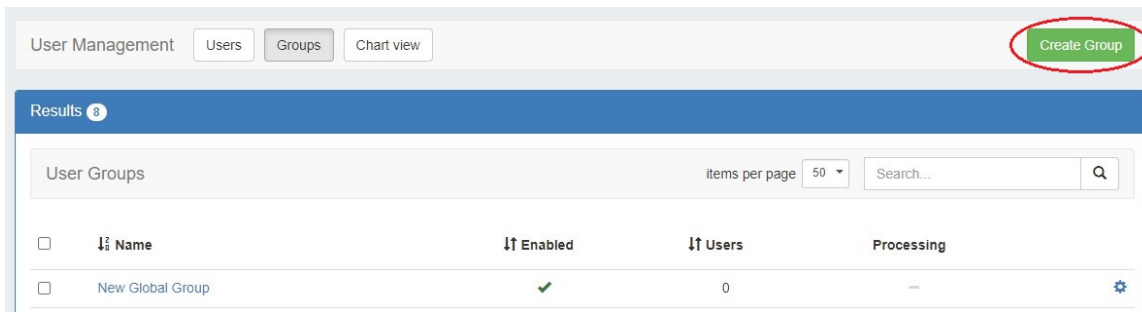

Overlapping group and user permissions

Permissions are inherited based on the hierarchy of the objects, unless you specify a different permission!

Working with Groups

Create a Group

New groups can be created by administrators by clicking the green "Create Group" button at the upper right of the Groups page.

The following fields are available to use:

Group Name: Enter in the desired group name

External ID: External Group name / ID for correlating ProVision's Group Name with external servers (such as SAML / Azure) that have a non-customizable group ID

Enable Toggle: Toggle on/off to enable or disable the group

Comments: Freeform text comments on the group

Add in the name of the new group, at minimum, and any other desired fields.

Set the permissions for that group by selecting the resource(s) from the Resource lookup dropdown menu, and clicking the "Add resource" button.

The Resource will be added to the permissions list, where you may select the functional areas and specific C/R/U/D permission that you want accessible for each area

You may select all C/R/U/D permissions by clicking the checkbox in the upper corner of a permissions box you can select all the checkboxes in that section.

To delete a Resource from the permissions list, simply click the "x" icon in the upper right corner.

Click "Save" when done.

In the example below, we make a group called "Some Example Group", whose users we want to be able to access two resources: An Example Resource, and An Example Resource 2.

These users will be working extensively in IPAM and Resources, so we give them full access to those areas of ProVision. However, we also want them to view other information, but not edit it. We then check the "R" column under Peer and User.

Save

Click "Save" when complete.

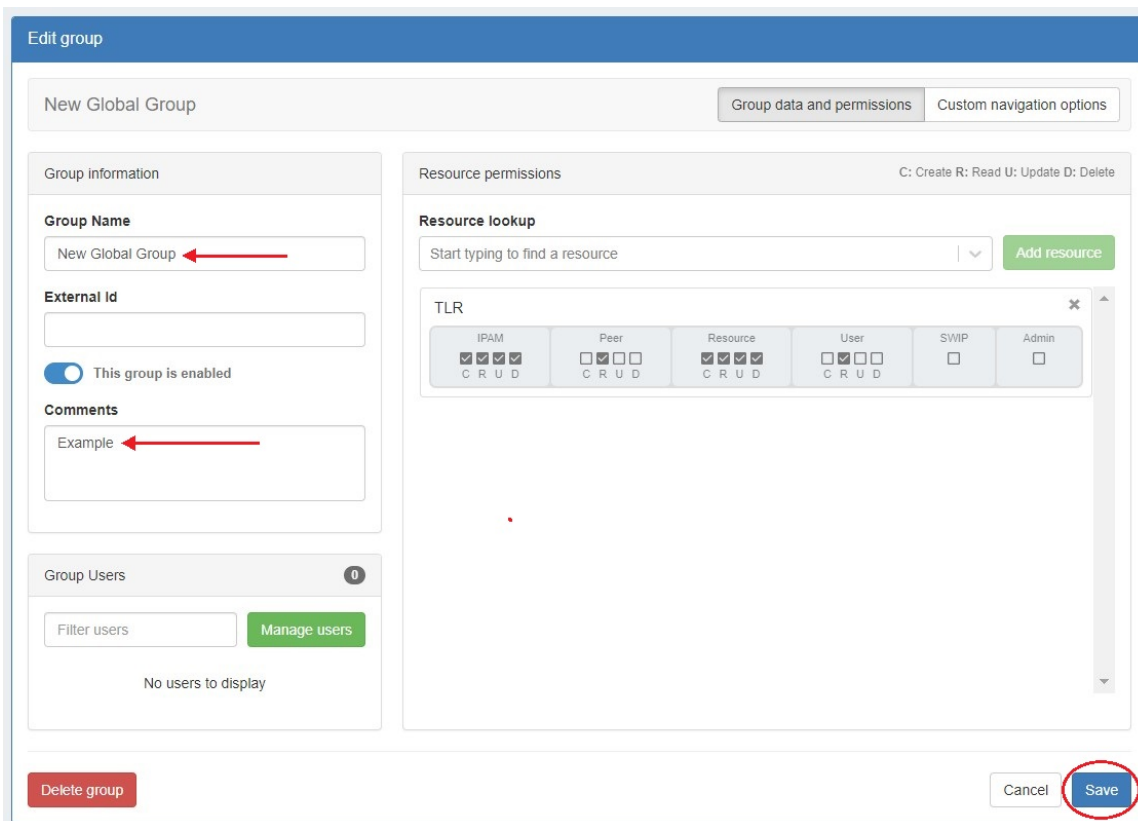

After adding the group, you can add users to the group by selecting the group when editing a user account or from the "Manage Users" section when editing a group.

Edit a Group

To edit a group's information click on the Action Menu (gear icon) for the group and select "Group Details" or click on the group name.

This will bring up the Edit Group screen. From here you can edit the group name or comment, add or remove users from a group, or change resource permissions for the group.

Remember to hit "Save" when done.

Manage Group Users

To add or remove users from the Group Details page, click the "Manage Users" button in the Group Users section.

Delete a Group

To remove a group from the Groups list, click on the Action Menu (gear icon) for the user and select the "Delete group" option.

The screenshot shows a table titled "User Groups" with 8 results. The table has columns: Name, Enabled, Users, and Processing. The rows are: New Global Group, Limited 1 - QA Test Resource, and Global Read-Only. A red circle highlights the gear icon in the Processing column for the "New Global Group" row. A red arrow points from this icon to a dropdown menu that contains "Group Details" and "Delete group".

<input type="checkbox"/>	Name	Enabled	Users	Processing
<input type="checkbox"/>	New Global Group	✓	0	—
<input type="checkbox"/>	Limited 1 - QA Test Resource	✓	1	—
<input type="checkbox"/>	Global Read-Only	✓	0	—

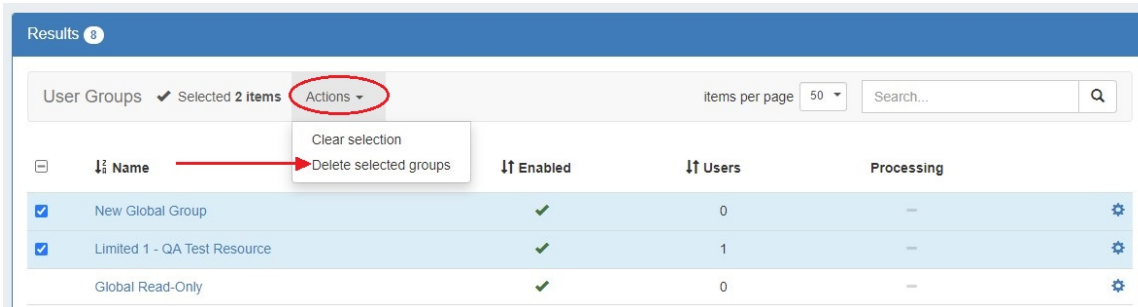

You may also delete a group from the Group Details page by clicking the "Delete group" button at the bottom left of the page.

The screenshot shows the bottom of a page with a "Delete group" button circled in red, a "Cancel" button, and a "Save" button.

You may also select more than one group to delete.

To do so, select the checkboxes for the desired groups, then under the "Actions" menu at the top of the list, select "Delete selected groups".

The screenshot shows the same "User Groups" table as before, but with the first two rows selected (checkboxes checked). A red circle highlights the "Actions" dropdown menu at the top. A red arrow points from this menu to a dropdown that contains "Clear selection" and "Delete selected groups".

<input type="checkbox"/>	Name	Enabled	Users	Processing
<input checked="" type="checkbox"/>	New Global Group	✓	0	—
<input checked="" type="checkbox"/>	Limited 1 - QA Test Resource	✓	1	—
<input type="checkbox"/>	Global Read-Only	✓	0	—

Note: Users cannot edit or delete permissions for the Group to which they currently belong, unless they are also a member of the default Global Admin Group.

Customize Group Navigation

Admins can select which tabs and subtabs are viewable to users based on their assigned user groups. From the Group Details page, select "Custom navigation options" at upper right.

Delete group Cancel Save

Enable the custom navigation selector and a menu of navigation links will appear. Use the eye icons to hide links from view of users in the group. For example, this group has no Peering permissions (as seen in the above image). Via custom navigation options you can simply hide the entire Peering tab from view for this group of users.

Edit group

☒ Enable a custom navigation for this group

Toggle item visibility on the list to hide them on the application menu.

Reset custom navigation

Customize navigation links

IPAM	<input checked="" type="checkbox"/>	?
IPAM Overview	<input checked="" type="checkbox"/>	?
VLAN	<input checked="" type="checkbox"/>	?
IPAM Treeview	<input checked="" type="checkbox"/>	?
Reporting	<input checked="" type="checkbox"/>	?
Logging	<input checked="" type="checkbox"/>	?
PEERING	<input type="checkbox"/>	?

Use the eye icon to enable a tab again or use the "Reset custom navigation" button to reset the whole menu and start again.

Remember, if users are part of multiple groups, they may still see tabs hidden from only one of the groups to which they belong.

Custom navigation only controls visibility. User permissions are set through the permissions module in the "Group date and permissions" section of Group Details. Using a custom navigation setting does not confer or deny any additional permissions.
